COMPANY NEWS

Singapore's NetPower Asia Partners With China's December Technology to Deliver Internet Based Solutions to Hungry Chinese Netizens.

14th October 2004 – Singapore. An agreement between NetPower Asia and December Info Tech, a Guangzhou based company has been signed with the objective of taking NetPower's Solutions to a booming Internet population in China expected to grow to 126 million in 2005 from the current 80 million¹

Partnership with December Info Tech gives the company exclusive rights to market and distribute brands under NetPower's banner which includes a Global Wireless Roaming and Clearinghouse solution known as NetROAM™ and a SPAM solution, SAFEMX™. NetPower also represents an SMS Marketing Provider and an Intelligent Search Engine that drives traffic to websites.

Both companies see this relationship as a strategic step in developing a market which is already revealing immediate results with a potential to explode in the near future.

This timely arrangement follows the recent announcement of NetPower's agreement with China Pay which will utilize NetPower's roaming technology, NetROAM™ to allow seamless wireless Internet access across any wireless Internet network using ATM card technology for payment and expanding that to pre-paid and credit/debit card modes.

In 2003, almost 1 trillion US dollars worth of plastic transactions took place in China, proving that cards are becoming a popular way to pay. This figure is largely due to the establishment of China Union Pay in March 2002. ChinaPay is a subsidiary of China Union Pay (CUP). CUP is the sole bank union in China established by more than 80 financial institutions. It has since built a nationwide network for bank card transactions, electronically linking the ATM networks of all China's banks thus providing universal access to ATMs for bank clients.
